

The PCI Merchant Education Program

Mastercard Adds 2 New PCI Education Modules to the On Demand Webinar Series

In continuing our efforts to broaden adoption and awareness of the PCI DSS, MasterCard will be adding two new modules based on industry feedback to expand on current offerings of the [PCI Merchant Education Program On Demand Webinar Series \(www.webcasts.com/mastercardpci\)](http://www.webcasts.com/mastercardpci).

NOW AVAILABLE!

Data Storage

Covers the complexities of both the temporary and long term storage of sensitive cardholder data. Additionally, an overview will be provided explaining what is allowed to be stored through authorization, what can be stored post authorization and what can never be stored. Also covered will be the many places that merchants potentially store cardholder data, which may not be obvious, as well as ways to identify and purge prohibited data.

PCI DSS Requirements Update - Version 1.2

The session will provide a detailed review of the requirements of the PCI DSS by section. Includes changes to the PCI DSS with clarifications and explanations to the requirements, with these clarifications offering improved flexibility to address today's security challenges in the payment card transaction environment. Changes will eliminate existing redundant sub-requirements while improving scoping and reporting requirements. Discussion on remediation and compensating controls will complete the session.

PCI 360 Series

- An Introduction to the PCI Security Standards Council
- A Detailed Look at PCI DSS Requirements
- A Merchant's Journey Towards Compliance
